

A-M

CAPICORDA

per conduttori in rame

File no. E125401

I capicorda della serie A-M sono ricavati da tubo di rame elettrolitico di sezione tale da garantire sia una buona connessione elettrica che un'adeguata resistenza alla trazione.

Sono ricotti e protetti superficialmente mediante stagnatura elettrolitica.

Il processo di ricottura ottimizza le caratteristiche strutturali del materiale, permette quindi una compressione più agevole e garantisce l'utilizzo del capocorda in presenza di sollecitazioni meccaniche di varia natura.

Il colletto è provvisto di smusso e foro d'ispezione per una facile e corretta introduzione del conduttore; la sua lunghezza inoltre è tale da rendere agevole e preciso il posizionamento all'interno delle matrici degli utensili.

Ogni capocorda riporta incisi:

- marchio di fabbrica e numero di catalogo Cembre.
- natura e sezione del conduttore (mm²).
- Ø della vite (mm).

A richiesta possono essere forniti capicorda con attacco a due o più fori.
